Abstract

© 2014 by Nova Science Publishers, Inc. All rights reserved. This chapter describes the basic principles of a novel methodology to investigate the protein-water interactions. This methodology is based on the analysis of the excess thermodynamic functions (volume V , enthalpy H , entropy S , heat capacity C_p , and Gibbs free energy G) of mixing. The advantages of our methodology are: i) We are able to simultaneously determine the excess partial quantities of water and proteins; ii) These thermodynamic quantities can be determined in the entire range of water content.
